## 2. Types of Numbers

Now let's learn the difference between cardinal, ordinal, and nominal numbers. Practice saying these numbers out loud.

## A. Cardinal Numbers

These are numbers that answer the question "How many?"

| ONES | TENS |  |
| :--- | :--- | :--- |
| zero (0) | ten (10) | twenty (20) |
| one (1) | eleven (11) | twenty-one (21) |
| two (2) | twelve (12) | twenty-two (22) |
| three (3) | thirteen (13) | thirty (30) |
| four (4) | fourteen (14) | forty (40) |
| five (5) | fifteen (15) | fifty (50) |
| six (6) | sixteen (16) | sixty (60 |
| seven (7) | seventeen (17) | seventy (70) |
| eight (8) | eighteen (18) | eighty (80) |
| nine (9) | nineteen (19) | ninety (90) |

HUNDREDS AND THOUSANDS
one hundred / a hundred (100)
one hundred and one (101)
one hundred (and) ninety-nine (199)
two hundred (200)
one thousand $(1,000)$
two thousand (and) twenty-five $(2,025)$
one hundred thousand (100,000)
nine hundred (and) ninety-nine
thousand, nine hundred (and) ninety-
nine $(999,999)$

## HUNDREDS AND THOUSANDS

one hundred / a hundred (100)
one hundred and one (101)
one hundred (and) ninety-nine (199)
two hundred (200)
one thousand $(1,000)$
two thousand (and) twenty-five $(2,025)$
one hundred thousand $(100,000)$
nine hundred (and) ninety-nine thousand, nine hundred (and) ninetynine $(999,999)$

## MILLIONS +

one million (6 zeros)
two million
one billion ( 9 zeros)
one trillion ( 12 zeros)

## B. Ordinal Numbers

These numbers indicate a place or rank.

| first $\left(1^{\text {st }}\right)$ | sixth $\left(6^{\text {th }}\right)$ |
| :--- | :--- |
| second $\left(2^{\text {nd }}\right)$ | seventh $\left(7^{\text {th }}\right)$ |
| third $\left(3^{\text {rd }}\right)$ | twentieth $\left(20^{\text {th }}\right)$ |
| fourth $\left(4^{\text {th }}\right)$ | twenty-first $\left(21^{\text {st }}\right)$ |
| fifth $\left(5^{\text {th }}\right)$ | thirtieth $\left(30^{\text {th }}\right)$ |

one-hundredth ( $100^{\text {th }}$ )
one-hundred and first (101st)

Small text in words like " 1 st" is called superscript. These letters are sometimes removed in writing.

## C. Nominal Numbers

Nominal numbers are not used for counting purposes. They aren't used to describe a position or rank either. Nominal numbers are simply used for identification purposes. Here are some examples:

- telephone numbers
- numbers on race cars, horses, or athletes
- zip codes and postal codes
- license plate numbers
- address numbers
- numbers on ID cards, such as a driver's license, library card, or social insurance card

In spoken English, people often repeat these numbers to confirm that they are correct.

A: My phone number is 223-456-7890.

B: 223-456-7890?
A: That's correct.
A: My license plate number is 2238AB.

B: 2338AB?
A: No, 2238AB. (with emphasis on the incorrect \#)
